Job Title

SOC Analyst – Level 1

Company Overview

Cyberweave Security Operations Pvt. Ltd. is a managed security services provider based in Navi Mumbai. Its 24x7 security operations centre monitors networks, endpoints and cloud accounts for mid-sized enterprises in the finance, healthcare and manufacturing sectors across India.

Role Summary

The Level 1 SOC Analyst monitors security alerts, performs initial triage according to documented runbooks, and escalates validated incidents to Level 2 analysts with clear evidence. The role is designed for early-career professionals and does not require incident-response leadership or independent threat hunting.

Key Responsibilities

- Monitor SIEM alert queues during 24x7 rotational shifts and carry out initial triage using runbooks.
- Review logs from firewalls, endpoints, proxies, DNS and authentication systems to classify alerts as false positive, benign or suspicious.
- Investigate reported phishing emails by checking headers, URLs and attachments, and act according to procedure.
- Escalate validated incidents to Level 2 with a clear timeline and supporting evidence.
- Record incidents accurately in the ticketing system and maintain shift handover notes.
- Follow incident response procedures for common events such as malware, account compromise and phishing, under supervision.
- Identify noisy alerts and suggest candidates for false-positive tuning.

Required Technical Skills

- SIEM: working use of at least one of Microsoft Sentinel, Splunk, IBM QRadar, Elastic or a comparable platform for monitoring, searching and reviewing alerts. Lab or training experience is acceptable.
- Basic log analysis: Windows event logs, firewall, proxy and authentication logs.
- Networking fundamentals: TCP/IP, DNS, HTTP and HTTPS, common ports and basic packet inspection with Wireshark.
- Common attack indicators: phishing, brute-force attempts, malware beaconing and suspicious logins, with basic awareness of MITRE ATT&CK.
- Security fundamentals: confidentiality, integrity and availability, malware types, OWASP basics and identity and access concepts.
- Incident documentation and escalation practices.
- Basic familiarity is sufficient for EDR consoles and for scripting in Python, PowerShell or Bash.

Required Experience

- 0 to 2 years of experience in security operations or a related role.
- Fresh graduates are acceptable with a SOC internship, home-lab or practical training that included SIEM use and alert triage.
- Willingness to work rotational shifts, including night shifts.
- Incident response leadership or threat hunting experience is not expected.

Education

B.Tech, B.E., BCA, B.Sc. or MCA in Computer Science, Information Technology, Cybersecurity, Electronics or a related field. A diploma with relevant security training may be considered.

Certifications

Mandatory certifications: None.

Preferred certifications (not mandatory): CompTIA Security+, Microsoft SC-900, Microsoft SC-200, Splunk Fundamentals or Core Certified User, or Certified SOC Analyst (CSA).

Preferred Qualifications

- A home lab using tools such as Wazuh, Splunk or Elastic.
- Participation in capture-the-flag events.
- Use of a phishing or malware sandbox.
- Basic scripting for log processing.
- Exposure to ticketing tools such as ServiceNow or Jira.

Evaluation Priorities

- Evidence of SIEM use, in a job, internship or lab, and of alert triage activity.
- Networking and log analysis fundamentals shown through projects, internships or coursework.
- Phishing analysis experience.
- Documentation and escalation practice.
- Absence of professional experience should not count against a candidate who shows practical evidence. Advanced incident response and threat hunting are not required. Certifications are preferred only.

Employment Details

- Location: Navi Mumbai, Maharashtra
- Employment type: Full-time, permanent
- Work arrangement: On-site at the security operations centre, 24x7 rotational shifts including nights
