Location: Kochi, Kerala, India

Professional Summary

Business and data analyst with two years of experience turning financial services data into dashboards and decision support. Advanced SQL, Power BI with DAX, and Python for analysis; exposure to A/B test readouts and basic regression. Best suited to analytics-heavy roles where stakeholder communication matters as much as modelling.

Technical Skills

Programming: SQL (advanced), Python (Pandas, NumPy)

Business Intelligence: Power BI, DAX, Tableau, Excel (Power Query, pivot models)

Statistics: Descriptive statistics, confidence intervals, t-tests, chi-square tests, linear regression

Data Preparation: Data cleaning, data modelling (star schema), reconciliation, KPI definition

Tools: Microsoft SQL Server, Git, Jira

Work Experience

Business Analyst - Data - Malabar FinServe Solutions Pvt Ltd
Kochi, Kerala | Aug 2024 - Present

- Own the Power BI dashboard suite for retail lending, covering disbursement, delinquency buckets and collection efficiency; used weekly by about 40 business and operations users.
- Rebuilt the delinquency model in a star schema with DAX measures, cutting report refresh time from 25 minutes to 6 minutes.
- Analysed a collections-message A/B test (about 12,000 customers per arm) with a two-proportion test and recommended the variant that raised repayment within 7 days by 3.4 percentage points.
- Wrote SQL reconciliation checks that found a 0.6% mismatch between the loan system and the finance ledger, resolved with the data engineering team.
- Documented KPI definitions in a shared data dictionary adopted by the risk and operations teams.

Data Analyst Intern - Malabar FinServe Solutions Pvt Ltd
Kochi, Kerala | Jan 2024 - Jul 2024

- Prepared monthly branch performance reports in Excel and SQL, then migrated them to Power BI.

Projects

Branch Performance Scorecard

- Problem: Branch managers lacked a single comparable view of productivity and portfolio quality.
- Approach: Defined eight KPIs with business owners, modelled data in SQL Server, and built a Power BI scorecard with percentile ranks and drill-through.
- Technologies: SQL Server, Power BI, DAX
- Results: Adopted in monthly review meetings across 22 branches.

Loan Default Exploratory Study

- Problem: Understand which applicant attributes were associated with default in a public credit dataset.
- Approach: Performed univariate and bivariate analysis, binned continuous variables, tested associations with chi-square tests and fitted a logistic regression baseline.
- Technologies: Python, Pandas, statsmodels, Seaborn
- Results: Documented five risk segments and a baseline model with ROC-AUC 0.77.

Education

B.Tech, Information Technology, Malabar College of Engineering and Technology, Kochi (2020 - 2024) - CGPA 8.0 / 10

Certifications

- Microsoft Power BI Data Analyst Associate (PL-300)
- SQL Advanced Certificate (HackerRank)

Achievements

- Cut dashboard refresh time by about 75% through data model redesign.
- Runner-up, company analytics case competition, 2025.
