Location: Jaipur, Rajasthan, India

Professional Summary

Data Scientist with almost four years of experience in e-commerce analytics. Strong in data cleaning, feature engineering and visual storytelling, with interactive Streamlit and Plotly tools built for non-technical teams. Uses classical NLP for review analysis; moving from analyst work into end-to-end modelling.

Technical Skills

Programming: Python, SQL (MySQL, BigQuery)

Data Wrangling: Pandas, NumPy, data cleaning, outlier treatment, missing value strategies, feature engineering pipelines

Machine Learning: Scikit-learn, random forest, gradient boosting, KMeans, TF-IDF with logistic regression

Visualization: Plotly, Matplotlib, Seaborn, Streamlit, Looker Studio

Text Analytics: Review sentiment analysis, topic modelling with LDA, spaCy basics

Tools: Git, Jupyter, Docker (basic)

Work Experience

Data Scientist - Pink City Commerce Labs Pvt Ltd
Jaipur, Rajasthan | Jul 2024 - Present

- Built a customer lifetime value prediction pipeline with Pandas and scikit-learn pipelines; deciles from the model guided retention spend for the top 20% of customers.
- Created a Streamlit app that lets merchandisers explore product performance, price bands and return rates without writing SQL; adopted by 25 users.
- Analysed 90,000 product reviews with TF-IDF and LDA topics, surfacing packaging and sizing complaints that led to two catalogue changes.
- Standardised feature engineering code into reusable transformers shared across three projects.

Data Analyst - Pink City Commerce Labs Pvt Ltd
Jaipur, Rajasthan | Dec 2022 - Jun 2024

- Cleaned and reconciled marketplace order data from five sources, reducing report discrepancies by 70%.
- Built weekly Looker Studio dashboards on conversion, cart abandonment and category performance.
- Ran customer segmentation with KMeans on purchase behaviour and shared four segments with marketing.

Projects

Return Reason Explorer

- Problem: Operations could not see which factors drove returns.
- Approach: Cleaned free-text return reasons, grouped them with keyword rules and LDA, and built an interactive Plotly dashboard.
- Technologies: Python, Plotly, Streamlit
- Results: Showed that 38% of apparel returns related to sizing, triggering updated size guides.

Sales Forecast Notebook for Seasonal Categories

- Problem: Seasonal categories were over-stocked after festivals.
- Approach: Compared seasonal naive, Holt-Winters and gradient boosting baselines using rolling backtests.
- Technologies: Python, statsmodels, Scikit-learn
- Results: Holt-Winters cut error on three categories by 14% versus the naive baseline.

Education

MCA, Rajputana Institute of Technology, Jaipur (2020 - 2022) - CGPA 8.3 / 10

B.Sc., Statistics, Rajputana Government Science College, Jaipur (2017 - 2020)

Certifications

- Data Visualization with Python (IBM, Coursera, 2023)
- Mathematics for Machine Learning (Coursera, 2022)

Achievements

- Streamlit tools adopted by merchandising and operations teams.
- Best Data Story award at company hack day, 2024.
