Professional Summary

Entry-level SOC analyst with a six-month internship in alert triage and phishing analysis. Practised Splunk searches, Windows event log review and basic MITRE ATT&CK mapping, and maintains a Wazuh home lab. Looking for an L1 SOC analyst role with mentoring on incident handling and escalation.

Technical Skills

SOC Fundamentals: Alert triage, ticket documentation, escalation procedures, shift handover, phishing analysis

SIEM and Logs: Splunk (SPL basics), Wazuh, Windows Event Logs (4624, 4625, 4688), Linux auth logs

Networking: TCP/IP, DNS, HTTP, Wireshark, firewall log reading

Threat Knowledge: MITRE ATT&CK basics, common malware types, OWASP Top 10 awareness, VirusTotal and AbuseIPDB lookups

Scripting: Python (basic), Bash (basic)

Learning Platforms: TryHackMe, LetsDefend

Work Experience

SOC Analyst Intern (L1) - Rajputana Managed Security Pvt Ltd
Jaipur, Rajasthan | Dec 2025 - May 2026

- Triaged about 25 alerts per shift from Splunk under L2 supervision, closing false positives with documented reasoning and escalating confirmed cases.
- Analysed 60+ reported phishing emails by checking headers, URLs and attachments in a sandbox; flagged 14 malicious emails that led to sender blocks.
- Wrote three SPL searches for repeated failed logons and rare process creation that were added to the team's saved searches.
- Mapped escalated cases to MITRE ATT&CK techniques in the case notes and joined weekly detection review calls.

Projects

Wazuh Home Lab

- Problem: Practise detection and response on realistic endpoint logs.
- Approach: Deployed a Wazuh server with Windows and Linux agents, simulated brute-force and persistence activity in a test network, and tuned rules to reduce noise.
- Technologies: Wazuh, Windows 10 VM, Ubuntu, Kali Linux
- Results: Documented detections for 8 test attacks and cut noisy alerts by about 30% after tuning.

Phishing Email Investigation Playbook

- Problem: Standardise how a new analyst investigates reported phishing.
- Approach: Wrote a step-by-step checklist covering headers, URL reputation, attachment sandboxing and user notification.
- Technologies: Python, VirusTotal, URLScan, Markdown
- Results: Used by two other interns for consistent case notes.

Network Traffic Analysis Exercise

- Problem: Identify suspicious behaviour in a packet capture of a simulated compromise.
- Approach: Used Wireshark filters to find DNS tunnelling and beaconing patterns and wrote an incident summary.
- Technologies: Wireshark, Zeek (basic)
- Results: Correctly identified command-and-control traffic in lab scenario.

Education

B.Tech, Computer Science and Engineering (Cyber Security), Rajputana Institute of Technology, Jaipur (2022 - 2026) - CGPA 8.1 / 10

Certifications

- CompTIA Security+ (2026)
- Splunk Core Certified User (2025)
- TryHackMe SOC Level 1 Path (completed)

Achievements

- Top 5%, national student capture-the-flag event, 2025.
- Founded the college cyber security club's blue team study group.
